## Quality control validation levels

Chemical standards manufactured by Agilent are supplied with a lot-specific certificate of analysis (C of A) that reflects the associated quality control validation level. Certificates of analysis can ship with the product and are available online. All Agilent products, unless otherwise stated, are Level II - ISO Guide 34 reference materials.

		Reported Value	Reported Uncertainty	Former Name	Solutions	Neats	Lead Time (Customs)
Level I	ISO Guide 34 RM	True (calculated)	$U_{char}$	Gravimetric	Y	Y	5 business days
Level II	ISO Guide 34 RM	True (analytical)	$U_{char}$	Full validation	Y	Y	7 to 10 business days
Level III	ISO Guide 34	Certified	$U_{exp}$	ISO Guide 34	Y		15 to 20 business days

**Level I solution:** A reference material (RM) prepared gravimetrically in accordance with ISO Guide 34 and under the Agilent ISO 9001 registered quality system. The neat materials used for the product are verified by an Agilent ISO 17025 laboratory and under the Agilent ISO Guide 34 accreditation. For each analyte, the true value, with its uncertainty value calculated at 95% confidence level, is reported.

**Level I neat:** RM prepared in accordance with ISO Guide 34 and under the Agilent ISO 9001 registered quality system. The true value (% purity) is reported.

## Triple certification

### **Agilent is committed to product integrity by offering customers the assurance of triple certification to ISO standards.**

Agilent operates under an ISO 9001 registered quality management system, where an accrediting body (TUV) attests to the quality of our methods, procedures, testing, production, and record keeping.

Our quality control laboratory is accredited to ISO 17025 (ANAB) for technical competence to perform testing of organic and inorganic materials and certified reference materials, as defined in our scope, accessible online at

**[www.agilent.com/chem/17025](http://www.agilent.com/chem/17025)**

Agilent is further accredited to ISO Guide 34 (ANAB) for technical competence as a reference material producer of certified reference materials. This requires Agilent to identify and document the major components of uncertainty including homogeneity, short- and long-term stability, and uncertainty due to analytical characterization and manufacturing.

## Pesticide Standards – Neat and in Solution

Agilent standards, available in ampoules or vials, can be used either for immediate use or for long-term storage. For best results, analytical standards should be used immediately upon opening, and never transferred for later use. Should you need to store standards, the CERTAN bottle is the most secure, innovative package for that purpose.

Each component in a reference standard is pre-analyzed, and the solvents are of the highest quality available. Neat standards are shipped with a certificate showing the purity of the compound that is available for each standard. Solution standards are gravimetrically prepared to a precision of  $\pm 0.5\%$ , and are shipped with a certificate showing the true concentration of the pesticide in the standard.

# Polynuclear Aromatic Hydrocarbon (PAH) Standards

PAHs are widespread persistent pollutants. Some have toxic or carcinogenic properties. All of these materials are manufactured under the Agilent ISO 9001 quality system. A certificate showing the purity of the compound is available for each standard.

### Agilent J&W Ultra Inert GC columns

The Agilent J&W Ultra Inert GC column family pushes industry standards for consistent column inertness and exceptionally low column bleed, resulting in lower detection limits and more accurate data for difficult analytes. Each Ultra Inert column is tested with the industry's most demanding test probe mixture and we prove it with a performance summary sheet shipped with each column.
