

Robotic Tips

High-throughput methods within the lab are now even more common thanks to new technologies and advancements in robots. Here at Kinesis we have a wide portfolio of consumables to aid in high-throughput methods from genotyping to drug discovery.

The precise automation of pipetting processes requires high-quality pipette tips with specific characteristics. Our range of KX Robotic Tips allows us to supply the correct tip to meet your needs, whether it be conductive tips, or clear. Conductive tips are becoming more and more essential for many workstations and we offer the compatible consumables for many of those stations.

Following the SBS standard, the tips are packed in 96 racks or in trays with 140 tips and can be used directly in the stations without re-packing. Both these and clear tips allow for even small volumes to be dosed with high precision and without contamination.

FEATURES

- High quality tips - engineered to exact specifications of original manufacturer
- Compatible with Hamilton, Tecan, Perkin Elmer and many more automated systems
- Transparent or conductive tips available
- Varying sizes
- Different packing solutions – with or without filter, blister or card-board packaging.
- RNase, DNase and endotoxin free
- Available Sterilized
